3.10
WATERING.

Sec. 3.10 Watering.
If potable water is not continually available to the dogs and cats, it must be offered to the dogs and cats as often as necessary to ensure their health and well-being, but not less than twice daily for at least 1 hour each time, unless restricted by the attending veterinarian. Water receptacles must be kept clean and sanitized in accordance with Sec. 3.11(b) of this subpart, and before being used to water a different dog or cat or social grouping of dogs or cats.

All of the water bowls were dirty with dirt, rocks, leaves and debris. Many of the water bowls had a slime layer on the side.

It is important to the health and well-being of the animals to have access to clean potable water at least two times a day for one hour.

The water bowls should be cleaned and sanitized at least once every 2 weeks and the dogs should be offered clean potable water at least 2 times a day.

Correct by: August 25, 2008.

3.11 (a) (1)
CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Sec. 3.11 Cleaning, sanitization, housekeeping, and pest control.
(a) Cleaning of primary enclosures. Excreta and food waste must be removed from primary enclosures daily, and from under primary enclosures as often as necessary to prevent an excessive accumulation of feces and food waste, to prevent soiling of the dogs or cats contained in the primary enclosures, and to reduce disease hazards, insects, pests and odors. When steam or water is used to clean the primary enclosure, whether by hosing, flushing, or other methods, dogs and cats must be removed, unless the enclosure is large enough to ensure the animals would not be harmed, wetted, or distressed in the process. Standing water must be removed from the primary enclosure and

animals in other primary enclosures must be protected from being contaminated with water and other wastes during the cleaning. The pans under primary enclosures with grill-type floors and the ground areas under raised runs with mesh or slatted floors must be cleaned as often as necessary to prevent accumulation of feces and food waste and to reduce disease hazards pests, insects and odors.(b) Sanitization of primary enclosures and food and water receptacles.

(1) Used primary enclosures and food and water receptacles must be cleaned and sanitized in accordance with this section before they can be used to house, feed, or water another dog or cat, or social grouping of dogs or cats.

All of the primary enclosures had a heavy accumulation of feces, dirt and old food in them. There was excessive accumulation of hair on the primary enclosures and on the floor in the Sundowner and Utility Kennels.

It is important to the health and well-being of the dogs to live in a clean and sanitary environment.

All of the primary enclosures should be cleaned daily and sanitized as often as necessary to prevent the accumulation of dirt and hair.

Correct by August 25, 2008.

This inspection and exit interview occurred with the owner.

WATERING.

If potable water is not continually available to the dogs and cats, it must be offered to the dogs and cats as often as necessary to ensure their health and well-being, but not less than twice daily for at least 1 hour each time, unless restricted by the attending veterinarian. Water receptacles must be kept clean and sanitized in accordance with Sec. 3.11(b) of this subpart, and before being used to water a different dog or cat or social grouping of dogs or cats.

All of the water bowls on the premises, except the nursery room, were frozen so the dogs could not drink. All of the water bowls on the premises were dirty and needed to be cleaned.

It is important to the health and well-being of the dogs to access to water at least twice daily and be kept clean.

All of the water bowls should be cleaned and sanitized at least once every 2 weeks. The dogs should have potable water offered at least twice daily for 1 hour at a time minimum.

Correct immediately.

receptacles.
(1) Used primary enclosures and food and water receptacles must be cleaned and sanitized in accordance with this section before they can be used to house, feed, or water another dog or cat, or social grouping of dogs or cats.

All of the primary enclosures, except the nursery room, had a heavy accumulation of feces, dirt and old food in them.

It is important to the health and well-being of the dogs to live in environments which have the feces, dirt and old food cleaned daily.

All of the primary enclosures in all of the kennels, except the nursery room, should be cleaned daily of feces and dirt.

Correct immediately.

This inspection and exit interview occurred with the owner.

3.11 (a)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

This amended inspection report corrects the inspection of January 30, 2008, 39021 customer_id, 344096 inspection_id, 45721 site_id.

Sec. 3.11 Cleaning, sanitization, housekeeping, and pest control.
(a) Cleaning of primary enclosures. Excreta and food waste must be removed from primary enclosures daily, and from under primary enclosures as often as necessary to prevent an excessive accumulation of feces and food waste, to prevent soiling of the dogs or cats contained in the primary enclosures, and to reduce disease hazards, insects, pests and odors. When steam or water is used to clean the primary enclosure, whether by hosing, flushing, or other methods, dogs and cats must be removed, unless the enclosure is large enough to ensure the animals would not be harmed, wetted, or distressed in the process. Standing water must be removed from the primary enclosure and animals in other primary enclosures must be protected from being contaminated with water and other wastes during the cleaning. The pans under primary enclosures with grill-type floors and the ground areas under raised runs with mesh or slatted floors must be cleaned as often as necessary to prevent accumulation of feces and food waste and to reduce disease hazards pests, insects and odors.(b) Sanitization of primary enclosures and food and water receptacles.

All of the primary enclosures, except the nursery room, were heavily soiled with feces, dirt and old food. The excessive accumulation of described waste was not enough to prevent soiling of the dogs and the reduction of disease hazards, insects, pests and odors. The kennels smelled of dog manure.

It is important to the health and well-being of the animals to live in a clean and sanitary environment.

All of the primary enclosures should have excreta and food wastes removed daily and under the primary enclosures often enough to prevent the excessive accumulation of feces, food wastes and dirt.

Correct immediately.
